- Fibromyalgia
- Golfers elbow
- ITB syndrome
- Muscle strain
- Flat feet
- Plantar fasciitis
- Rotator cuff syndrome
- RSI – Repetitive Strain Injury
- Shin splints
- Tennis elbow

TREATING OVERUSE INJURIES EFFECTIVELY

Photizo Sport is effective in treating pain and inflammation associated with overuse injuries, for example, runners' knee, shin splints, tennis and golfers elbow.

Photizo Sport stimulates healing, relieves pain, swelling and inflammation, reduces muscle spasms, and increases the blood and lymph vessel diameter, to ensure clearing of waste products and inflow of oxygen and nutrients in the treated areas.

HOW DOES PHOTIZO SPORT WORK?

Photizo Sport's LED light therapy harnesses the healing power of red and infrared light at specific wavelengths and frequencies for accelerated healing by activating the pain and relaxing 'medication' of your body.

LEDs, or light-emitting diodes, are non-invasive, painless, produce a gentle and soothing warmth and do not require recovery time.

Photizo Sport allows increased blood flow into the area being treated to ensure that any waste is quickly removed from the area.

USING PHOTIZO SPORT

Simply place the Photizo Sport's head (containing the LEDs) on the area to be treated, press the ON button and wait until the timed treatment ends, then move it to the next area requiring treatment. Repeat until you have finished treating all the desired areas.
